Day 2 Morning Kick-Off: 15-Minute Rapid Revision & Readiness Check

Bridge from Day 1 Foundations (S01–S02) to Day 2 Execution (S03–S04)

Lead Instructor: Mohamed Fouad Fakhruldeen (Fakhr.me)

Timing: 09:00 – 09:15 (First 15 Minutes of Day 2)

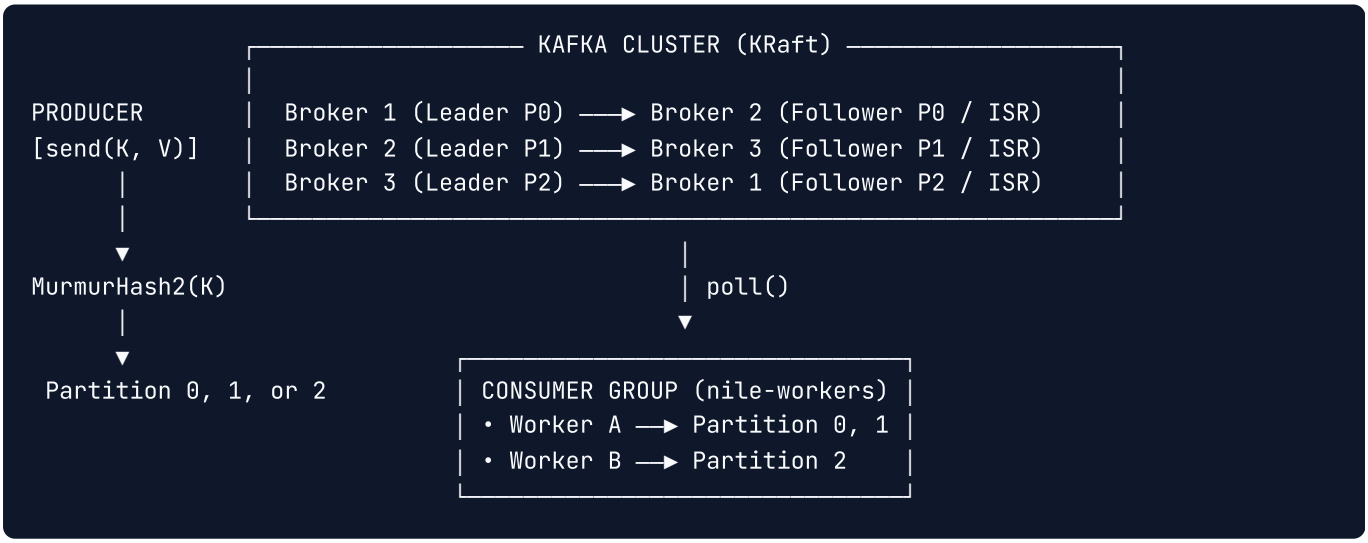

Medium: Whiteboard Hook + Interactive Call-and-Response + 2-Minute Student Terminal Check

⏱️ Minute-by-Minute Delivery Plan (15 Contact Minutes)

```
00:00 - 03:00 (3 min)  | 1. The 60-Second Visual Recap (Whiteboard Hook)
03:00 - 07:00 (4 min)  | 2. The 3 Diagnostic Killer Questions (Class Engagement)
07:00 - 11:00 (4 min)  | 3. 2-Minute Workstation Pre-Flight Check (Laptops Open)
11:00 - 15:00 (4 min)  | 4. The Day 2 Roadmap: Producers, Consumers & Contracts
```

🎨 Segment 1: The 60-Second Visual Recap (00:00 – 03:00)

Draw this diagram on the whiteboard immediately as students take their seats:

Verbal Recap Script (Bilingual / Spoken Cues):

> **"صباح الخير يا شباب! في اليوم الأول اتعلمنا إن كافكا مش مجرد Queue تقليدي، كافكا هو Commit Log موزع ومقسم لـ Partitions. البارتشن هو وحدة التوازي والتخزين والترتيب. وطالما عندك مفتاح (Key)، رسايلك كلها هتروح لنفس البارتشن وتترتب بالترتيب الزمني الصارم."**
>
> *Yesterday, we established that a Kafka Topic is not a monolithic file—it is partitioned horizontally. Partitions" are the fundamental unit of scalability, parallelism, and strict ordering. Every partition has 1 Leader and ".multiple Followers in the In-Sync Replicas (ISR) pool*

❓ Segment 2: The 3 Diagnostic Killer Questions (03:00 – 07:00)

Ask these rapid-fire questions to the room to wake up trainees and diagnose retention:

🎯 Question 1 (Parallelism & Groups):

> **"لو عندنا Topic فيه 3 Partitions، وعملنا Consumer Group فيه 4 Consumers شغالين.. الـ Consumer الرابع ده هيعمل إيه؟"**
>
> **Expected Trainee Answer: هيكون عاطل (Idle / Standby)!**
>
> **Instructor Takeaway:** *"A single partition can never be read by more than 1 consumer in the same group. ".Consumer count beyond partition count gives only idle standby capacity*

🎯 Question 2 (Durability & Quorum):

> **"لو الـ Topic مضبوط على `replication.factor = 3` و `min.insync.replicas = 2`.. والـ Producer بيبعت بـ `acks = all`.. فجأة سيرفرين وقعوا (Brokers crashed 2) وفضل سيرفر واحد بس شغال.. هل كافكا هيقبل الكتابة ولا هيرفضها؟"**
>
> **Expected Trainee Answer: هيرفض فوراً ويطلع `NotEnoughReplicasException` (Exception!)**
>
> **Instructor Takeaway:** *"Because $1 < \text{min.insync.replicas} (2)$. Kafka chooses consistency over !availability (CP in CAP theorem) to guarantee zero silent data loss"*

🎯 Question 3 (Key Routing & Ordering):

> **"لو تطبيق الموبايل بعت 5 أوردرات ورا بعض لنفس العميل `CUSTOMER_101` ، هل ممكن أوردر منهم يسبق التاني في الاستهلاك؟"**
>
> **Expected Trainee Answer: مستحيل!**
>
> **Instructor Takeaway:** *"Because MurmurHash2 maps identical keys to the exact same partition, where records are appended to an immutable sequential log."*

💻 Segment 3: 2-Minute Workstation Pre-Flight Check (07:00 – 11:00)

Instruct every trainee to open their laptops, launch their terminal, and execute:

```
cd ~/Desktop/Work/Training/Spark/00_Lab
tools/check_stack.sh
```

Verification Criteria on Student Screens:

```
[1/6] Checking kafka1 (Port 9092)... PASS
[2/6] Checking kafka2 (Port 9093)... PASS
[3/6] Checking kafka3 (Port 9094)... PASS
[4/6] Checking schema-registry (Port 8081)... PASS
[5/6] Checking connect (Port 8083)... PASS
[6/6] Checking kafka-ui (Port 8080)... PASS
```

> **Action:** If any student has an unhealthy service, run `docker compose up -d` immediately.

🚀 Segment 4: Day 2 Roadmap & Hand-Off to S03 (11:00 – 15:00)

Set expectations for Day 2:

1. **Morning Block (S03 Producer Internals):**
   - We look inside the producer client: The `RecordAccumulator`, dual-threading, `batch.size`, `linger.ms`, and **Snappy** compression.
   - We mathematically prove **Idempotence** (`enable.idempotence=true`) to eliminate duplicate transactions forever.
2. **Afternoon Block (S04 Consumer Internals):**
   - We run multi-terminal consumer groups side-by-side.

- We observe live **Cooperative Sticky Rebalancing**, crash a consumer worker live, and route poison pills to **Dead Letter Topics (`.DLT`)**.

3. **50% Dedicated Machine Time:**
   - Trainees will spend 2.5 hours coding in Python, tuning batching parameters, running pytest suites, and passing the automated gates (`verify_s02.sh` , `verify_s03.sh` , `verify_s04.sh`).

(End of 15-Minute Revision — Transition immediately to S03 Conceptual Slides)
